

Checkpoint — Demo Split

Anmol & Omkar

April 28, 2026

Demo flow & feature split

~10 minutes, single account (demo@example.com) in one browser tab. **Anmol opens** by setting up the world — auth, app shell, server, invites, channel creation. **Omkar takes over** to actually use it: check-ins, real-time, Coach Bot, leaderboard.

Anmol — set up the world

1. **Auth + Mission Control dashboard** Split-screen login with the live product preview pane; sign in. Land on the dashboard: greeting, **Coach Bot quote card** with 100 attributed quotes (Marcus Aurelius, Seneca, Confucius, etc.) that rotate every five minutes plus a cycle button. Today's progress ring, pending check-in list, stats bento, week pulse, year heatmap.
2. **Sidebar + servers** Discord-style server rail with a sliding green indicator pill — channel column slides in only when you pick a server. Walk through the seeded servers (Run, College, Social), then create a fresh server live to show the create-server dialog and the new tile dropping into the library grid.
3. **Invites + welcome-on-join** Open the invite dialog on the new server: generate an invite with optional max-uses + expiry, copy the share URL. Explain the invite-accept flow triggers a Coach Bot **welcome message** on the server's first channel — point at the welcome cards already visible on the seeded servers as examples.
4. **Channel kinds (creation)** Open the create-channel dialog. Walk through the four shapes a channel can take: **numeric** (km, minutes), **binary** (done / not done), **freeform** (note-only), and **checklist** with per-item types — binary checkboxes mixed with numeric inputs in the same channel (e.g. morning routine: [x] made bed, [x] stretched, # meditation 30 min). Build a mixed checklist live. **Hand off to Omkar — channel ready, time to use it.**

Omkar — use the channel

1. **Check-in flow across kinds** Live demo on the seeded channels: log a 5 km run on #Daily running, mark #garbage-day done, tick a few #midterm-daa chapters in the mixed checklist, write a freeform reflection. Cards adapt per kind — numeric value, "Marked done" pill, chapter list with strikethroughs, note-only entry. Streak badge warms with length (gray to amber to green-glow at 30+); daily dashboard pills light green for today's done members.

2. **Real-time round-trip & feed dynamics** Type a chat message in the composer and send — it lands in the feed instantly via WebSocket (no refresh, no polling). Add an emoji reaction to a check-in card; the pill updates live with the reacted-by-me highlight. Toggle the **Today / All time filter** at the top of the feed; auto-scroll-to-bottom kicks in. Sonner toast fires on success.
3. **Coach Bot in the feed + scheduler** Walk through the **CoachMessage cards** already threaded into the feed (every channel has 7-9 — welcomes, daily summaries, inactivity nudges). Show the parsing: progress bar from “X of Y members in”, flame pill for top streak, amber card for nudges, mention pills. APScheduler crons fire automatically — daily summary 21:00 UTC, nudges 09:00 UTC, welcome on invite-accept (Anmol’s flow). On the **Today** filter the most recent summary stays pinned at the top.
4. **Leaderboard, profile, year heatmap** Right-rail monthly leaderboard ranks members; gold/silver/bronze for the top three. Click a peer (e.g. anmol) — profile dialog with avatar, joined date, and a year-long activity heatmap scoped to the channel. Compare with demo’s heatmap, then back to the **dashboard year heatmap** for the global view.

Cheat sheet

- **Demo login:** demo@example.com / demo1234
- **Servers seeded:** Run, College, Social
- **Channels covering all kinds:** #Daily running (numeric), #midterm-daa (mixed checklist), #garbage-day (binary), plus four more
- **Each channel has 7-9 Coach Bot messages** — pick any to point at
- **Hard-refresh** if anything looks stale: Cmd-Shift-R
